# Pulsantiera a due mani

## Two-hand control device

### ■ SISTEMA MODULARE PER PULSANTIERE

Il nuovo sistema modulare per pulsantiera di comando che la New Elfin ha realizzato pensando alle esigenze del mercato e del tuo lavoro trova impiego nel settore dell'automazione industriale, è dotato di una serie di componenti che permettono di configurare svariate strutture ottimizzate per essere integrate con le macchine utensili con cui dovranno interagire come presse, piegatrici, saldatrici laser ecc.

### ■ COLORAZIONE

La scelta delle colorazioni in toni di grigio e dell'alluminio satinato permettono l'armonizzazione estetica con gli apparati di destinazione; la colorazione in toni neutri evita un eccessivo impatto cromatico che può andare anche a discapito della concentrazione degli operatori alle macchine.

### ■ DIMENSIONI E FORMA

Nel progettare il nuovo comando a due mani è stata valutata la necessità di installazione in spazi ridotti e quindi ne è nato un prodotto con dimensioni 380 x 90 x 90 mm e con un notevole volume interno.

La forma ergonomica del nuovo comando a due mani conferisce un notevole comfort durante l'utilizzo; la dimensione della sezione di appoggio del palmo permette una contrapposizione tra il pollice e le altre dita facilitando l'azionamento dei pulsanti.

### ■ MODULAR SYSTEM FOR P/B PANELS

The new modular system for push-button panels, specifically designed by New Elfin to meet specific market and working needs. This modular system for industrial automation applications offers several components that enable you to configure many of the frames designed for machine-tools, like presses, folding machines, laser welding machines, etc.

### ■ COLORATION

The range of colours available, from grey to satin aluminium, enhance the aesthetic integration with existing equipment, while the use of neutral shades reduces the chromatic impact that could distract machine operators during work.

### ■ DIMENSIONS AND SHAPE

The new two-hand control device designed to be installed in small areas, has dimensions of 380 x 90 x 90 mm and very large internal volume.

Its ergonomic shape enhances comfort during use, while the size of the palm resting area enables operators to easily grasp the buttons between the thumb and fingers.

# Pulsantiera a due mani Two-hand control device

## ■ SISTEMA MODULARE PER PULSANTIERE

L'estrema modularità del sistema permette di configurare anche soluzioni a braccio di sostegno dove è possibile applicare diversi componenti specifici.

La forma particolare dei giunti garantisce solidità e rigidità alla struttura, e le dimensioni ridotte permettono di allestire svariate versioni con la maggior parte dei contenitori.

L'asola del giunto ortogonale permette il suo inserimento nella colonna anche dopo una eventuale posa di cavi elettrici.

## ■ KIT DI RUOTE

Il kit di ruote risolve razionalmente il problema della mobilità senza compromettere la solidità di appoggio della base. La base è predisposta per ricevere tutte le possibili configurazioni di applicazioni fisse o mobili.

## ■ KIT DI CONNESSIONE

Il kit di connessione risolve efficacemente tutti i problemi di cablaggio tra i numerosi possibili componenti.

## ■ MODULAR SYSTEM FOR P/B PANELS

Being highly modular, the system can also be fitted with a supporting bracket, which can be used to hold a wide range of specific components.

The truncated conical shape of the coupling confers solidity and rigidity to the frame. The system can in fact be easily combined with most of containers.

The straight coupling slot enables the system to be inserted into a column even after the cable laying.

## ■ CASTOR KIT

The castor kit offers a rational solution to the problem of mobility without affecting the overall stability of the base.

The base can also be joined to several fixed or mobile elements in an unlimited range of configurations.

## ■ CONNECTION KIT

The exclusive connection kit helps you to effectively wire up all the components installed on the base.

# Dispositivi di comando a due mani

## Two-hand control devices

### DEFINIZIONE DI COMANDO A DUE MANI (UNI EN 292/1 PUNTO 3.23.4)

#### 3.23.4

Comando a due mani: comando ad azione mantenuta che richiede almeno l'azionamento simultaneo dei due comandi manuali (attuatori) per avviare e mantenere il funzionamento della macchina o degli elementi di quest'ultima, assicurando così protezione alla persona che li aziona.

### CLASSIFICAZIONE DEI COMANDI A DUE MANI (CEI EN 60204.1 PUNTO 9.2.5.7)

#### 9.2.5.7

Comandi a due mani: esistono tre tipi di comandi a due mani, la cui selezione dipende dalla valutazione dei rischi. Essi devono avere le caratteristiche seguenti:

**TIPO 1:** questo tipo richiede:

- la fornitura di due dispositivi di comando dell'attivazione che necessitano l'uso contemporaneo delle due mani;
- l'attivazione continua durante le situazioni pericolose;
- l'interruzione dell'attivazione della macchina al rilascio di uno qualsiasi dei dispositivi di comando dell'attivazione, se le condizioni rimangono pericolose.

**TIPO 2:** comando di tipo 1 che richiede il rilascio di entrambi i dispositivi di comando dell'attivazione, prima che il funzionamento della macchina possa ripartire.

**TIPO 3:** comando di tipo 2 che richiede un'attivazione contemporanea dei dispositivi di comando dell'attivazione come segue:

- deve essere necessario fare funzionare i dispositivi di comando dell'attivazione entro un determinato tempo limite minore o uguale a 0,5 s (Appendice B); e
- quando viene superato il tempo limite, entrambi i dispositivi di comando dell'attivazione devono essere rilasciati prima che possa essere iniziata una nuova operazione.

### DEFINITION OF TWO HAND CONTROL (UNI EN 292/1 ITEM 3.23.4)

#### 3.23.4

Two hand control: maintained action control which requires at least the simultaneous activation of the two manual controls (actuators) to start up and continue running the machine and its elements, thus ensuring that operators are protected.

### CLASSIFICATION OF TWO HAND CONTROLS (CEI EN 60204.1 ITEM 9.2.5.7)

#### 9.2.5.7

Two hand controls: there are three types of two hand control, the selection of which depends on risk assessment. They must have the following features:

**TYPE 1:** this type must have:

- the supply of two activation control devices which require the simultaneous use of both hands;
- constant activation during dangerous situations;
- machine cut-off when any activation control is released, if conditions continue to be dangerous.

**TYPE 2:** type 1 control which requires the release of both activation control devices for the machine to start running again.

**TYPE 3:** type 2 control which requires the simultaneous activation of the activation control devices as follows:

- it must be possible to engage the activation control devices within a set time equal to or less than 0.5 seconds (Appendix B); and
- when the time limit is up, both activation control devices must be released before a new operation can begin.

# Modulo di contemporaneità

## Simultaneous action controller

### Modulo di contemporaneità / Simultaneous action controller

Modulo / Controller

g

cod

295

060MCP2M

Il modulo di contemporaneità 060MCP2M è un componente di sicurezza adibito al controllo della simultaneità di due operatori, protetti da azioni involontarie, utilizzati congiuntamente.

Il modulo di contemporaneità 060MCP2M rientra nella categoria di Tipo III C, poiché oltre che a rispondere ai requisiti della norma UNI EN 574, ha un circuito di retroazione, che attribuisce al modulo una funzione di autocontrollo (categoria 4) delle eventuali anomalie (cortocircuiti o inceppamenti) sia degli attuatori e, se collegati in serie, dei contatti ausiliari di apparecchi di manovra.

The 060MCP2M relay is a safety device for controlling the simultaneous action of two operators, protected from accidental actions, used together. The 060MCP2M relay belongs to category III C, due to the fact that, as well as satisfying UNI EN 574, it has a retroaction circuit which attributes a self-control function to the module (category 4) for any faults with the actuators (short circuits or jamming) and, if connected in series, with the auxiliary contacts of manoeuvring equipment.

### Caratteristiche tecniche

Peso	190 g
Temperatura di funzionamento	0...+55 °C
Temperatura di stoccaggio	-25...+70
Grado di protezione (IEC60529)	IP20
Grado di contaminazione	2
Montaggio	Guida DIN Standard 35mm
Tipo di connessione	Terminali a vite
Tensione di alimentazione	24±10% (AC 50 + 60 Hz) V AC/DC
Potenza assorbita	2 VA / 2W
Sincronizzazione tra gli ingressi	< 500 ms
Terminali uscite sicure	13-14, 23-24, 31-32
Tensione sulle uscite sicure	250 V AC
Corrente sulle uscite sicure	6 A (MAX)

# Pulsanti a palmo

## Palm switches

G

Gli azionatori a palmo, per il comando e controllo di circuiti elettrici alimentati sia in CC che in CA, sono progettati per **utilizzi energici o d'urgenza**.

Il **design particolarmente accurato ed ergonomico** ne permette l'utilizzo anche avendo guanti da lavoro oppure con altre parti del corpo quali: gomito, spalla, ginocchio, piede. Inoltre la **linearità senza soluzione di continuità** evita che vi si possano impigliare indumenti, capelli, o elementi estranei. Realizzati in **resina termoplastica antiurto**, con componenti metallici in acciaio inox, possono essere installati in ambienti con atmosfera particolarmente umida o corrosiva e dove sussiste il pericolo di scariche elettrostatiche. Nella **versione luminosa** la lampada è posta su ammortizzatori per salvarla in caso di utilizzi particolarmente gravosi e con forti vibrazioni. Disponibile in due varianti: con tasto bombato o a fungo avvolgente, luminoso o no, con funzionamento momentaneo o ad aggancio. In fine la grande superficie dei tasti consente di stampare complesse informazioni.

P

Palm switches for the command and control of both DC and AC circuits are designed for **energetic or emergency use**.

The particularly **careful and ergonomic design** allows them to be pushed even when wearing work gloves or using other parts of the body such as elbow, shoulder, knee and foot. Moreover its **dome shape** prevents clothing, hair or other elements from being caught up. Made from **shockproof thermoplastic resin**, with stainless steel parts, they can be installed in particularly damp or corrosive atmospheric environments where there is the risk of electrostatic discharge. The **illuminated palm switches** are provided with a lamp fitted onto shock absorbers to safeguard it when used in particularly severe environments or with strong vibrations. They are available in two models: with dome or mushroom buttons, normal or illuminated, momentary or latching. Furthermore the big button surface allows complex symbols to be printed on.

# Pulsantiera mobile

## Hand-held push-button control unit

### ■ PULSANTIERA MOBILE

L'unità portatile è stata progettata per rispondere ai requisiti di ergonomia, sicurezza ed affidabilità. Questo tipo di apparecchiature trova un utilizzo ideale nei settori dei sistemi di automazione a controllo numerico e nelle applicazioni con robot industriali. Le caratteristiche dimensionali della parte superiore permettono di realizzare svariate configurazioni di operatori, mentre nella parte inferiore, usata come impugnatura, è possibile allestire tastiere a membrana; nei lati è prevista la possibilità d'installare pulsanti di abilitazione a 3 posizioni con funzione antipanico. La caratteristica forma della pulsantiera è stata progettata per proteggere gli operatori (anche nel caso di selettori con chiave inserita) da eventuali urti o shock.

### ■ MODULAR SYSTEM FOR PUSH-BUTTON

The hand-held unit has been designed to meet ergonomic and safety requirements and to offer reliability. This type of equipment is ideal for usage in numeric control automation systems and applications which use industrial robots. The size of the upper part makes it possible to create various operator configurations, while the lower part, used to grip the unit, can be equipped with 3 positions enabling switch, with antipanic function. The characteristic shape of the button board is designed to protect operators (also when the key selector is inserted) from collision or shock.

## Technical data

## Caratteristiche pulsanti

Durata meccanica	5 x 10 <sup>5</sup> cicli di manovra
Durata elettrica	1 x 10 <sup>5</sup> cicli di manovra
Tensione nominale Ue	250v AC
Corrente nominale Ia	4 A
Potenze nominali di impiego in AC 15 secondo IEC947-5-1	1000 VA
Tensione di isolamento UI	300V Uimp 2,5 Kv

## Push-button performance

Mechanical durability	5 x 10 <sup>5</sup> operations
Electrical durability	1 x 10 <sup>5</sup> operations
Rating operating voltage Ue	250v AC
Rating operating current Ia	4 A
Rated switching power according to IEC947-5-1	1000 VA
Insulation Voltage UI	300V Uimp 2,5 Kv
